BOOST! licence content

Preamble

This document describes the services contained in the BOOST! licences.

The GIREVE Services granted by a BOOST! licence are grouped in three categories: (i) Business Services, (ii) Roaming Services, (iii) Clearing Services. Each GIREVE's Service is identified by an identification number ("IDNo" in the tables below) and is further described in the document "GIREVE - BOOST! services description" with the same identification number.

In this document, the symbols have the following meaning:

- ●   service is included in the BOOST! licence
- ●*   service is included in the BOOST! licence but is actually available with the Contracting Party's Partners having subscribed to this service on their side
- ○   service is not included in the BOOST! Licence
- ○*   service is not available in the BOOST! licence at the time of the signature between the Parties but will be automatically included when the service is released by GIREVE
